### ABSTRACT:

*Over the past few years, there has been an increasing emphasis on the significance of sustainability across different industries. With consumers becoming more conscious of environmental issues, numerous companies have started incorporating sustainable practices into their operations. The year 2020 particularly stood out as a pivotal moment for environmental sustainability, marked by initiatives like "The Decade to Deliver" and offering significant opportunities for global leaders to address these challenges. In this year many organizations fell into sustainability goals. In 2023, expect to see further companies taking more planned action towards approving a circular economy such as innovation and recycling technology, reuse options, etc.,*

*In India, a variety of environmental sustainability practices are implemented, including energy and water conservation, minimizing single-use plastics, promoting sustainable food systems, waste reduction, encouraging healthy lifestyles, and managing e-waste. Meanwhile, some highly developed countries have seen declines in net emissions recently. Automobile companies also growing their share of gasoline-powered cars. The contemporary sustainability movement focuses not only on safeguarding the environment but also on aligning the actions of present human generations with the requirements of future generations. This essay aims to thoroughly assess the evolving trends in sustainability and their consequential effects.*

**KEYWORDS:** *Sustainable, Environment, Companies, Trends.*
